AMENDMENT U.S. Appln. No. 09/622,439

An expression vector comprising a polynucleotide encoding a G protein-coupled receptor comprising amino acids 1 to 370 of SEQ ID NO: 4 when said expression vector is present in a compatible host cell.

A process for producing a recombinant host cell comprising transforming or transfecting a cell with the expression vector of claim 2 such that the host cell, under appropriate conditions, produces said G protein-coupled receptor protein.

A recombinant host cell produced by the process of claim 13.

A membrane of the recombinant host cell of claim 14 expressing said

polypeptide.

A method for producing a G protein-coupled receptor protein comprising culturing the host cell of claim under conditions sufficient for the production of said G protein-coupled receptor protein and recovering said protein from the culture.

An isolated polynucleotide that is fully complementary to an isolated polynucleotide comprising a nucleotide sequence encoding a G protein-coupled receptor protein comprising amino acids 1 to 370 of SEQ ID NO:4.

The isolated polynucleotide of claim 17 that is fully complementary to polynucleotides 1 to 1113 of SEQ ID NO:3.

An isolated polynucleotide encoding a polypeptide comprising amino acids 1 to 370 of SEQ ID NO: 4.

The isolated polynucleotide of claim 19, which encodes a polypeptide consisting of amino acids 1 to 370 of SEQ ID NO:4.

The isolated polynucleotide of claim 19 which is RNA.

Dy.

AMENDMENT U.S. Appln. No. 09/622,439

18 24 9

The isolated polynucleotide of claim 19 which is DNA.

An expression vector comprising a polynucleotide encoding a polypeptide comprising amino acids 1 to 370 of SEQ ID NO: 4 when said expression vector is present in a compatible host cell.

A process for producing a recombinant host cell comprising transforming or transfecting a cell with the expression vector of claim 25 such that the host cell, under appropriate conditions, produces said polypeptide.

75. 27. 26.

polypeptide.

A recombinant host cell produced by the process of claim 24.

A membrane of the recombinant host cell of claim # expressing said

A method for producing a polypeptide comprising culturing the host cell of claim 25 under conditions sufficient for the production of said polypeptide and recovering said polypeptide from the culture.

An isolated polynucleotide that is fully complementary to an isolated polynucleotide comprising a nucleotide sequence encoding a polypeptide comprising amino acids 1 to 370 of SEQ ID NO:4.

The isolated polynucleotide of claim 28 that is fully complementary to polynucleotides 1 to 1113 of SEQ ID NO:3.

An isolated polynucleotide comprising polynucleotides 1 to 1113 of SEQ ID NO:3.
